

# N25-P3

Maturity: 2750 CHU

Canada 2006-2007

Strong yield and very good plant health will make this hybrid a consistent performer year after year. Glyphosate tolerance trait adds a stress free weed control option.

### Descriptive Traits

|                         |           |
|-------------------------|-----------|
| Herbicide Traits        | GT,LL     |
| Insect Traits           | CB        |
| Extra Edge              | -         |
| Relative Maturity (CHU) | 2750      |
| CHU: Range              | 2675-2800 |
| GDUs: Mid-Silk          | 1225      |
| GDUs: Black Layer       | 2310      |

### Agronomic Traits

|                                     |             |
|-------------------------------------|-------------|
| Yield for Maturity                  | 1           |
| Drydown                             | 3           |
| Test Weight                         | 2           |
| Stalk Strength                      | 2           |
| Root Strength                       | 3           |
| Drought Tolerance during Grain Fill | 3           |
| Mid-Season Greensnap                | -           |
| Staygreen                           | 2           |
| Late Intactness                     | 3           |
| Drydown                             | 3           |
| Response to Low Density             | 2           |
| Response to High Density            | 4           |
| Plant Height                        | Medium      |
| Ear Height                          | Medium      |
| Ear Type                            | Semi-Flex   |
| Husk Cover                          | Medium      |
| Kernel Depth                        | Medium      |
| Kernel Texture                      | Medium      |
| Ear Shape                           | Semi-Blocky |

### Disease and Insect Ratings

|                          |   |
|--------------------------|---|
| Crown Rot                | 4 |
| NCLB                     | - |
| Gray Leaf Spot           | - |
| GLS Eastern Strain       | - |
| Eyespot                  | - |
| Common Rust              | - |
| Stewart's Bacterial Wilt | - |
| ECB - 1st Generation     | 1 |
| ECB - 2nd Generation     | - |

### Herbicide Sensitivity

|                       |   |
|-----------------------|---|
| Callisto (Mesotrione) | - |
| Growth Regulators     | - |
| ALS Inhibitors        | - |

### Silage Traits

|                           |   |
|---------------------------|---|
| CHU:Silage                | - |
| Silage Yield              | - |
| NDF Content               | - |
| NDF Digestibility         | - |
| >60% Corn Silage          | - |
| >60% Alfalfa              | - |
| 50/50 Corn Silage/Alfalfa | - |
| Whole Plant Digestibility | - |
| Forage Starch             | - |
| Beef Ration               | - |
| Silage Protein Content    | - |
