

N27-C7

Maturity: 2750 CHU

Canada 2006-2007

Yield and plant health provide the cornerstones for an outstanding corn hybrid, N27-C7 brings both to the marketplace.

Descriptive Traits

Herbicide Traits	LL
Insect Traits	CB
Extra Edge	-
Relative Maturity (CHU)	2750
CHU: Range	2657-2800
GDUs: Mid-Silk	1225
GDUs: Black Layer	2300

Agronomic Traits

Yield for Maturity	1
Drydown	2
Test Weight	1
Stalk Strength	1
Root Strength	2
Drought Tolerance during Grain Fill	3
Mid-Season Greensnap	4
Staygreen	3
Late Intactness	2
Drydown	2
Response to Low Density	1
Response to High Density	2
Plant Height	Medium-Tall
Ear Height	medium high
Ear Type	Semi-Flex
Husk Cover	tight
Kernel Depth	Deep
Kernel Texture	medium-hard
Ear Shape	Semi-Blocky

Disease and Insect Ratings

Crown Rot	-
NCLB	-
Gray Leaf Spot	-
GLS Eastern Strain	-
Eyespot	-
Common Rust	-
Stewart's Bacterial Wilt	-
ECB - 1st Generation	-
ECB - 2nd Generation	-

Herbicide Sensitivity

Callisto (Mesotrione)	-
Growth Regulators	-
ALS Inhibitors	-

Silage Traits

CHU:Silage	-
Silage Yield	-
NDF Content	-
NDF Digestibility	-
>60% Corn Silage	-
>60% Alfalfa	-
50/50 Corn Silage/Alfalfa	-
Whole Plant Digestibility	-
Forage Starch	-
Beef Ration	-
Silage Protein Content	-

Ratings and descriptions are based on research and field observations collected by Syngenta Seeds, Inc. from multiple locations over multiple years.
